Osstell Beacon

– guiding your implant treatments

Unlock the full potential
by signing up to
OsstellConnect

[OsstellConnect](#) is a cloud-based solution offering a new way for clinicians to use data to enhance their dental implant treatments. It is the world's largest implant online portal with close to half a million ISQ readings. OsstellConnect is currently free of charge.

Go from Good to Great

Intuitive | Easy to use | Hassle-free

The Osstell Beacon tells you when an implant is ready for loading in a matter of seconds.

Predictable outcomes

Our method eliminates chance. When measuring implant stability, you will get an objective value, making implant treatments more predictable - even for patients with risk factors.

Reduced treatment time

Immediate loading is becoming more and more common. Patients want results fast. With Osstell®, you only wait as long as needed.

Proven Method

Backed by +1500 scientific studies, our method is based on RFA to determine whether or not an implant is stable enough. The result is presented as an ISQ value of 1-99. The higher the ISQ, the more stable the implant.

The Osstell ISQ Scale

The Osstell Beacon uses proprietary and evidenced-based RFA technology, backed by more than 1500 scientific studies.
